What's New in the Photoshop 2022?

Sometimes it's easier to create a new layer and work on it on a new layer without it affecting the original image you're editing. These tips will help you avoid layers, and instead use the tools that are already built into Photoshop. Layers are the basis of any Photoshop work. Once you have a layer you can do all kinds of editing on it that you couldn't on a regular picture. If you just put a picture into Photoshop and start doing whatever you want, it may be more difficult to undo later. If you find yourself having to undo a lot of work after you finish an edit, you may want to try a different approach.

Learn About Layers When you first open Photoshop, it may seem like everything is a picture you see on the screen. You may think that you have the power to do whatever you want to your pictures, but you can't change the way Photoshop sees what you're working with. This is because everything in Photoshop is made up of layers. You can't edit a single layer on its own. Instead, you have to edit everything on top of a layer. Layers are arranged in a grid. You can see this layer grid in Figure 1-1. Each square on the layer grid is a color. Different layers are made up of the same color squares. In some cases, you can have several layers with the same color. To create a new layer, click the New Layer button. You'll see a new layer appear at the bottom of the Layers palette and on the Layers panel. (To see the Layers panel, click the Layers panel button on the top right of the Photoshop workspace, as shown in Figure 1-1.)

Figure 1-1: Click the New Layer button to create a new layer. That's the only way to create a new layer. Using the layers toolbar or menu, you can make as many new layers as you want. You can also use the New Layer icon in the Toolbox to make a new layer when you're using that tool.

Layer Packing: Making Changes with Layer Groups The New Layer button is great, but sometimes you want to move or edit a group of layers simultaneously. You don't want to have to use the New Layer button for every single edit you want to make. To make it easier to edit a bunch of layers, you can create a layer group. When you make a layer group, you can edit
